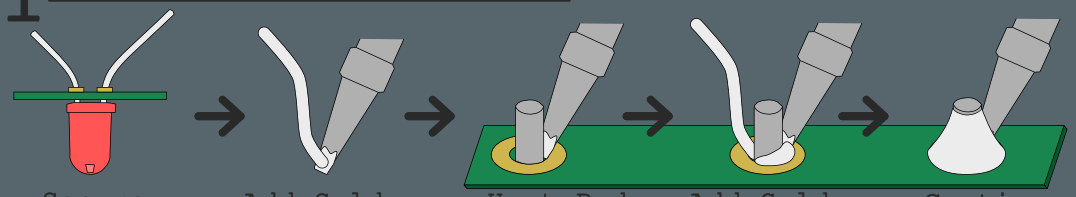
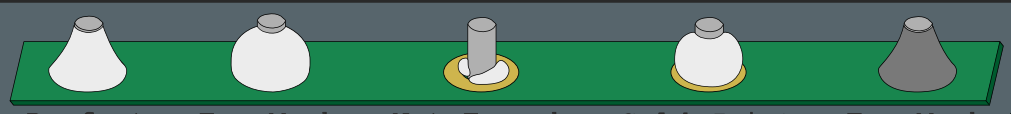
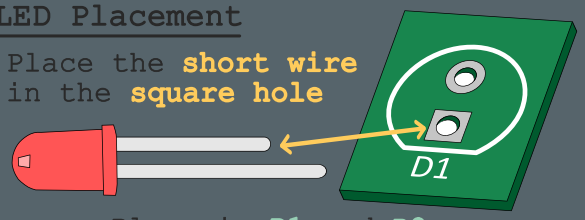
1 Review Soldering Techniques





2 LED Placement

Place the **short wire** in the **square hole**



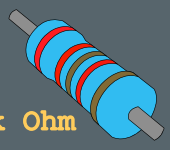
Place in **D1** and **D2**

3 Resistors

There are two different resistors included. Identify the resitors using the colored stripes on the resistor body.

1k Ohm

Place in **R2**



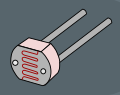
22.1k Ohm

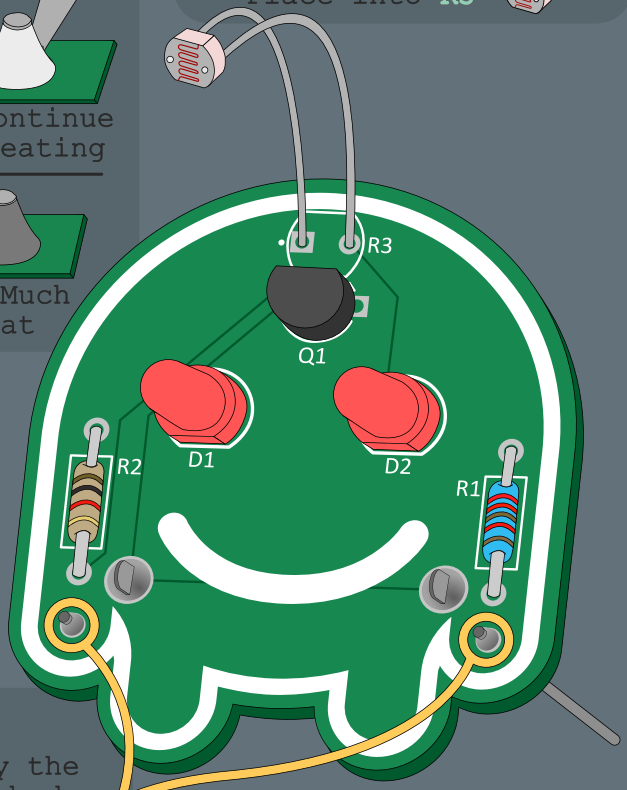
Place in **R1**

*After soldering snip off the excess wire and use for step 7

4 Photoresistor

Place into **R3**



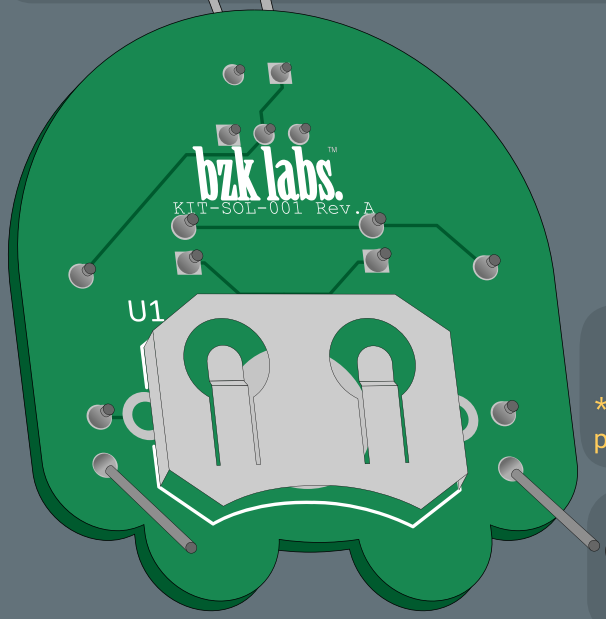


Front View

7 Stand

Place the excess wire from **step 3** through the **pads below** the resistors

*Wire should be long enough to hold PCB upright

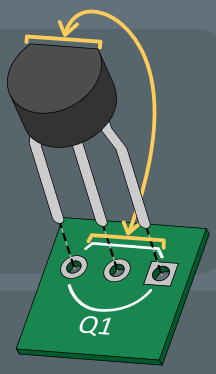


Rear View

5 Transistor

The top of the transistor is shaped like a **half circle**.
Use the **half circle** to orientate the transistor on the PCB

Place into **Q1**



6 Battery Holder

Place into **U1**

*Prior to installing make sure there is no adhesive residue on pad U1. Residue can prevent the battery from making contact.

8 Battery

Slide the battery into the holder.
The "+" symbol should be faced up
